

Superbright Nickel SLOTONIK 60

Superbright Nickel SLOTONIK 60 meets all the demands placed on a top quality nickel electrolyte. Its light deposits convince with their excellent throwing power, good levelling and by ductile deposits. Even at thin deposition layers an extremely high levelling can be achieved.

The layers deposited from Superbright Nickel SLOTONIK 60 may normally be directly chrome plated without any additional activation step.

Superbright Nickel SLOTONIK 60 is suitable for rack application with air- or mechanical agitation.

The information in this data sheet is based on laboratory as well as practical experience. Figures quoted for operating limits and replenishment quantities are for guidance. Actual values necessary will depend on the components being plated (material and geometry), their application and plating plant conditions.

Important:

Please read these instructions carefully and follow recommendations given. We reserve the right to make technical changes as necessary. In the interests of safety, please pay attention to the R- and S- phrases on the labels of the containers. The minimum shelf life of the additives is printed on the label of the container. The current IMDS number of the layer deposited from the process can be found on the internet at www.schloetter.com/downloads.

For the storage of chemical products only the TRGS 514 and TRGS 515 regulations must be followed. The Hazardous Goods Regulation (ADR/GGVS) are only valid **for transportation** and must not be applied to storage.
