

## Maintaining Passivations using Corrector PSV

During operation zinc accumulates in chrome(III)-based passivations, resulting in decreased corrosion protection and finally requiring renewal of the entire bath solution. Corrector PSV is used to remove zinc from passivations, thus extending the service life of the solution.

### Important:

Please read these instructions carefully and follow recommendations given.

We reserve the right to make technical changes as necessary.

In the interests of safety, please pay attention to the R- and S- phrases on the drum label.

The shelf life of the additives is generally 18 months.

The date of production is taken from the first 3 figures of the batch number.

Figure 1 = year; figures 2-3 = month; figures 4-7 = batch number; (UK labels use a 4 digit year code).

For the storage of chemical products only the Hazardous Substances Regulation must be followed.

The Hazardous Goods Regulation (ADR/GGVS) are only valid for transportation and must not be applied to storage.
